

Ultralok® Available with Wear Cap U60 Adapters Now Option for Excavators

Introducing new slim profile Ultralok assembly

The new ESCO® Ultralok adapter with wear cap provides the most economical solution to combat extreme abrasion for the 60-75 ton class of excavators. Protecting adapters with wear caps results in longer operating life, less maintenance and more time digging.

The slim profile adapter allows for smooth transition from the point to the wear cap, maintaining excavator performance while providing added adapter wear protection. The low-profile wear cap is held in place by the point on a tapered fit surface and includes a pry slot on the back edge for quick and easy replacement. Since the wear cap is mechanically attached, it is cast in a much harder steel than the adapter to provide long-lasting protection.

Ultralok adapter with wear cap

- More efficient digging cycles
- Increased adapter wear life
- Reduced maintenance costs
- Wear cap optimized for less throwaway weight
- Developed to perform in the toughest conditions
